AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A broadcast recording method utilizing a mobile terminal device having a broadcast signal receiving function and a mobile communication function, comprising:

detecting an incoming or outgoing call during receiving of a broadcast signal;
[[and]]

inquiring whether the broadcast signal should be recorded or not when an incoming or outgoing call is detected; and

starting recording the broadcast signal in response to an input that commands recording.

Claim 2 (Previously Presented): A broadcast recording method according to claim 1, further comprising:

detecting termination of an incoming or outgoing call; and
stopping recording of the broadcast signal when the termination of an incoming or outgoing call is detected.

Claim 3 (Previously Presented): A broadcast recording method according to claim 1, further comprising:

detecting termination of an incoming or outgoing call; and
playing back recorded broadcast signal information, when the termination of an incoming or outgoing call is detected.

Appl. No. 10/660,756

Response to Office Action dated March 17, 2008

Claim 4 (Currently Amended): A broadcast recording method according to claim 1, wherein the broadcast signal is recorded in a recording device installed in the mobile terminal device.

Claim 5 (Currently Amended): A broadcast recording method according to claim 1, wherein the broadcast signal is recorded in a recording device installed in an external recording server in response to a request from the mobile terminal device via a mobile communication network accessible to the mobile communication function.

Claim 6 (Currently Amended): A broadcast recording method utilizing a mobile terminal device having a broadcast signal receiving function and a mobile communication function, comprising:

detecting an incoming or outgoing call during receiving of a broadcast signal;

detecting a failure to receive the broadcast signal during the receiving of a broadcast; and

selectively recording the broadcast signal in the mobile terminal device or in a recording device installed in an external recording server when an incoming or outgoing call is detected or recording the broadcast signal in a recording device installed in an external recording server when a failure to receive the broadcast signal is detected.

Claim 7 (Canceled).

Claim 8 (Currently Amended): A mobile ~~An information~~ terminal device comprising a broadcast signal receiving function and a mobile communication function, wherein the device comprises a detector, and a transmitter for transmitting a command signal for recording a currently received broadcast signal in an external recording server

YAMADA et al.
Appl. No. 10/660,756
Response to Office Action dated March 17, 2008

when the detector detects that the broadcast signal cannot be received during recording of the broadcast signal.

Claim 9 (Currently Amended): A mobile ~~An information~~ terminal device according to claim 8, wherein the currently received broadcast signal is recorded when an outgoing or incoming call is detected.

Claim 10 (Currently Amended): A mobile ~~An information~~ terminal device comprising a broadcast signal receiving function and a mobile communication function, wherein a currently received broadcast signal is recorded when an outgoing or incoming call is detected during receiving of a broadcast signal, wherein the mobile ~~information~~ terminal device comprises an interface configured to inquire whether the currently received broadcast signal should be recorded or not.

Claim 11 (Currently Amended): A mobile ~~An information~~ terminal device according to claim 10, wherein the mobile ~~information~~ terminal device further comprises a transmitter for transmitting a command signal to record the currently received broadcast signal on an external recording server when it is detected that the broadcast signal cannot be received.

Claim 12 (Currently Amended): A mobile terminal ~~communication~~ device comprising:
a broadcast signal receiver for receiving a broadcast signal;
a receiving-status detector for detecting a status of the broadcast signal receiving;
a receiving signal recorder for recording broadcast information acquired from the received broadcast signal,
a call detector for detecting an incoming or outgoing call, or termination of an incoming or outgoing call; and

YAMADA et al.
Appl. No. 10/660,756
Response to Office Action dated March 17, 2008

a recording-start/playback command information generating circuit for generating recording-start and playback command information,

wherein the recording-start/playback command information generating circuit sends recording command information for recording the broadcast information to an external recording server via a mobile communication network when a broadcast signal receiving failure is detected by the receiving-status detector during receiving of the broadcast signal, sends recording command information for recording the currently received broadcast information to an external recording server via a mobile communication network when an incoming or outgoing call is detected by the call detector and/or notifies the receiving signal recorder about broadcast signal recording command information.

Claim 13 (Currently Amended): A mobile terminal ~~communication~~ device according to claim 12, wherein the recording-start/playback command information generating circuit sends the recording command information for recording the broadcast information to the external recording server via the communication network when the call detector detects an incoming or outgoing call and also when the receiving signal recorder cannot perform recording.

Claim 14 (Currently Amended): A mobile terminal ~~communication~~ device according to claim 12, comprising:

a playback information receiver for receiving playback information from the recording server via the communication network; and

a playback portion for playing back the playback information,

wherein the recording-start/playback command information generating circuit sends playback command information to stop playback of the broadcast information to the external recording server via the communication network when restoration of broadcast signal receiving is detected by the receiving status detector and, sends playback

YAMADA et al.
Appl. No. 10/660,756
Response to Office Action dated March 17, 2008

command information to playback the broadcast information to the external recording server via the communication network when termination of a call is detected by the call detector and/or reports playback command information to the receiving signal recorder.

Claims 15-17 (Canceled).

Claim 18 (Currently Amended): A broadcast recording system comprising a recording server including a recording device and a mobile information terminal device having broadcast signal functions and communication functions, wherein the recording server records broadcast information being received by the mobile information terminal device when the mobile terminal device sends a command which requires recording of the broadcast information to the recording server when a failure of receiving is detected during receiving of the broadcast information by the mobile information terminal device.

Claim 19 (Currently Amended): A broadcast recording system according to claim 18, wherein the recording server stops recording of the broadcast information when the mobile information terminal device detects recovery of the receiving of the broadcast information.

Claim 20 (Currently Amended): A broadcast recording system according to claim 18, wherein the recording server records broadcast information currently received by the mobile information terminal device when the mobile information terminal device starts a call communicating during the receiving of broadcast information.

Claim 21 (Currently Amended): A broadcast recording system according to claim 18, wherein the recording server stops recording of the broadcast information when the mobile information terminal device stops communicating.

YAMADA et al.
Appl. No. 10/660,756
Response to Office Action dated March 17, 2008

Claim 22 (Previously Presented): A program stored on a computer-readable storage medium for implementing the broadcast recording method according to claim 1.

Claim 23 (Currently Amended): A recording medium holding a program for implementing the broadcast recording method of claim 1 [[22]].

Claims 24-46 (Canceled).

Claim 47 (Currently Amended): A broadcast recording method utilizing a mobile terminal device having a broadcast signal receiving function and a mobile communication function, comprising: recording a broadcast signal in a recording device installed in an external recording server when it is impossible to record the broadcast signal in a recording device installed in the mobile terminal device.

Claims 48-56 (Canceled).

Claim 57 (Currently Amended): A broadcast recording method utilizing a mobile terminal device having a broadcast signal receiving function and a mobile communication function, comprising:
detecting a failure to receive a broadcast signal during receiving of a broadcast;
and
recording the broadcast signal when a failure of receiving broadcast signal is detected.

Claim 58 (Previously Presented): A broadcast recording method according to claim 57, wherein the broadcast signal is recorded in a recording device installed in an external recording server.

YAMADA et al.
Appl. No. 10/660,756
Response to Office Action dated March 17, 2008

Claims 59 and 60 (Canceled).

Claim 61 (Currently Amended): ~~A mobile An information terminal device~~
having a broadcast signal receiving function and a communication function, the device
comprising:
a detector; and
a transmitter for transmitting a command signal, to an external recording server, to
record a ~~currently recording~~ broadcast signal currently being recorded by a recording
device installed in the mobile terminal device signal on the [[an]] external recording
server when the detector detects that the broadcast signal cannot be recorded in the [[a]]
recording device installed in the terminal device.
